PROFESSIONAL SUMMARY

Data Analyst and Business Analytics specialist with experience building Power BI dashboards, optimizing reporting workflows, analyzing operational datasets, and delivering actionable business insights across cross-functional teams. Proficient in SQL, Python, Excel, Power BI, DAX, data modeling, ETL, process optimization, statistical analysis, and reporting automation with hands-on experience in operational analytics and KPI reporting.

Proven ability to improve reporting efficiency, identify process bottlenecks, conduct root cause analysis, and translate complex data into scalable, data-driven business solutions with measurable operational impact.

CORE SKILLS

Business Intelligence & Visualization: Power BI Desktop & Service, DAX, KPI Dashboards, Data Visualization, Reporting Automation, Dashboard Development

Programming & Analytics: Python, SQL, Pandas, NumPy, Matplotlib, Statistical Analysis, Trend Analysis, Predictive Analytics

Data Engineering & Processing: ETL, Data Extraction, Data Cleaning, Data Transformation, Data Validation, Query Optimization, Data Modeling

Business & Process Analytics: Process Optimization, Root Cause Analysis, Operational Analytics, Process Mapping, Business Case Analysis, Performance Measurement

Reporting & Collaboration: MIS Reporting, Stakeholder Communication, Cross-Functional Collaboration, Documentation, Governance Reporting, Workflow Automation

Tools & Platforms: Excel, Power Query, Power Platform Concepts, Data Warehousing Concepts, Salesforce Familiarity

PROFESSIONAL EXPERIENCE

NEDFi | Project Engineer – MIS & Analytics | May 2024 – Present

- Managed analytics and MIS reporting operations for 1,000+ government-funded projects across 8 states, supporting operational governance, KPI tracking, and strategic decision-making.
- Built and maintained Power BI dashboards tracking budget utilization, compliance metrics, operational bottlenecks, project delays, and workflow performance.
- Reduced reporting turnaround time by 40% through workflow automation, reporting standardization, and optimized data processing pipelines.
- Performed SQL-based data extraction, transformation, validation, and trend analysis to improve reporting accuracy, operational visibility, and process efficiency.
- Collaborated with cross-functional stakeholders to deliver actionable analytical insights supporting operational improvements and business decisions.
- Conducted root cause analysis on recurring reporting issues and implemented standardized validation workflows improving consistency and scalability.

Alliance Engineers & Consultants | Assistant Engineer – Data Analysis | Feb 2023 – Apr 2024

- Transformed raw survey and operational datasets into structured analytical reports supporting infrastructure planning, execution workflows, and stakeholder reporting.

- Built analytical reporting structures and operational dashboards improving visibility into project progress, approvals, and performance metrics.
- Improved data integrity and reporting consistency through data cleansing, preprocessing, validation controls, and workflow standardization initiatives.
- Supported cross-functional teams with operational analytics, process tracking, business reporting, and data-driven decision support.

KEY PROJECTS

Retail Profit Optimization Dashboard (Power BI, Python, SQL)

- Analyzed large retail datasets identifying 700+ loss-making products across categories through margin, pricing, and discount analysis.
- Built interactive KPI dashboards delivering real-time operational insights and identifying discounts above 20% as a major driver of margin leakage.
- Delivered actionable pricing optimization recommendations with projected 15–20% margin improvement opportunities.

SaaS Revenue & Retention Analytics (SQL, Python, Power BI)

- Developed churn and cohort analytics models to analyze subscription lifecycle behavior, retention patterns, and revenue leakage.
- Performed SQL-based data extraction, preprocessing, and transformation across customer datasets supporting operational and strategic reporting.
- Built dashboards tracking churn, retention, LTV, and customer performance metrics for business decision-making.

Pricing & Promotion Impact Simulator (Python, ML, Power BI)

- Developed regression-based forecasting model achieving $R^2 = 0.83$ for demand prediction and pricing scenario analysis.
- Built interactive simulations evaluating revenue-versus-profit trade-offs and promotional strategy effectiveness.
- Enabled data-driven business decisions through predictive analytics, visualization, and automated reporting insights.

EDUCATION

B.Tech, Civil Engineering

KIIT University | 2018 – 2022

CERTIFICATIONS

Google Data Analytics Professional Certificate

HackerRank SQL

HackerRank Python

HackerRank Problem Solving
